

BlackBerry® Development

Unleash The Power of Your BlackBerry!

BlackBerry® Development Benefits

- Custom Applications
- Data Encryption
- Photo Attachments
- GIS Enabled

Blackberry development is a new initiative for Geer Services, Inc. as an effort to provide custom Java® based mobile applications.

The first application was designed for mobile data collection of information about customers registering for a membership to an organization. Both personal and business information can be collected with the application.

Credit card information can also be collected for an individual and transmitted for approval. Photos can be associated with the customer record for identification purposes and transmitted to the server.

The completed transactions are encrypted and transmitted to a secure remote server where the data is decrypted and entered into a database.

Blackberry Development Highlights:

- Java Application
- Deploys using Blackberry Desktop Manager
- Associates Photos with Data Collected
- Uses GeerBuilt® Data Encryption Algorithm
- Web Interface for Report Generation
